ESTATEHAT FINANCIAL GOALS AND MODEL

Planning targets built around transaction-fee revenue and trust-led subscriptions

This summary frames the current EstateHat planning model for early investor conversations. It reflects target outcomes rather than historical financial performance and should be read as an operating plan, not audited reporting.

Core revenue drivers

DRIVER	CURRENT MODEL
Platform transaction fee	1.50% of completed transaction sale price
Verified User subscription	$20 per month
Escrow and wire line items	Shown in product flows but excluded from core software targets unless clearly retained by EstateHat

The financial lens used here is intentionally conservative: transaction-fee revenue and subscription revenue are emphasized, while any pass-through partner economics are excluded from core planning until confirmed.

Planning guardrails

- Focus on software-margin revenue.
- Avoid relying on pass-through fees for core performance targets.
- Preserve at least 12 months of runway after financing.
- Expand GTM only after compliance and billing hardening.

Model assumptions

ASSUMPTION AREA	PLANNING POSTURE
Average transaction mix	Built around GMV targets rather than a published average home-price assumption
Revenue recognition lens	Counts only transaction-fee and subscription revenue clearly attributable to EstateHat software economics
Growth pacing	Assumes disciplined scaling after compliance and billing hardening, not pure top-of-funnel expansion
Margin posture	Targets software-like economics by avoiding reliance on direct fund custody or principal risk

Headline financial goals

12-month completed transaction target	**100 transactions**
12-month gross merchandise volume target	**$35M GMV**
12-month modeled software revenue target	**$669k**
24-month completed transaction target	**300 transactions**
24-month gross merchandise volume target	**$105M GMV**
24-month modeled software revenue target	**$1.935M**

Modeled revenue build

METRIC	12 MONTHS	24 MONTHS
Completed transactions	100	300
Platform GMV	$35M	$105M
Transaction-fee revenue	$525k	$1.575M
Average paid Verified Users	600	1,500
Annualized subscription revenue	$144k	$360k
Total modeled software revenue	$669k	$1.935M

Sensitivity drivers

- Closed-transaction count is the biggest near-term driver of modeled revenue.
- GMV quality matters because the 1.50% fee scales directly with sale value.
- Paid Verified User adoption affects recurring revenue stability and quality of cohorts.
- Conversion improvements can move outcomes materially without requiring reckless top-of-funnel spend.

What would improve confidence

- Live billing and payout integrations.
- Reliable KPI cadence with cohort and funnel reporting.
- Clearer evidence that trust-first positioning improves user progression.
- Formal finance and compliance artifacts in the diligence package.

Operating goals

- Keep burn disciplined enough to maintain financing flexibility.
- Improve reporting maturity before broad institutional fundraising.
- Target contribution-margin-positive mature cohorts.

Important note

These goals are planning assumptions derived from the current product model in the repository. They are not forecasts backed by audited statements, and they should be revised as live conversion, retention, and pricing data mature.

- Aim for an operating break-even path after integrations and controlled GTM scale-up.

Investors should read this model as a directional planning tool that frames how EstateHat expects capital, operations, and trust posture to convert into software revenue over time.
